

Dŵr Cymru  
Welsh Water

# DRAFT DETERMINATION RESEARCH 2024

## Summary report – Dŵr Cymru Welsh Water

Prepared for Consumer Council for Water and Ofwat  
Prepared by Impact Research

October 2024

## Dŵr Cymru Welsh Water: key points...

### Household finances

20% of billpayers struggled to pay at least one household bill in the past year, either most of the time or all the time.

18% billpayers currently find it quite or very difficult to manage their finances.

Looking to 2030, 40% of billpayers think their household finances will get worse by then and 25% better.

### Water bill affordability

44% find their current water bill easy to afford; this falls to 23% for the proposed bill from 2025-2030.

20% find their current water bill difficult to afford; this increases to 48% for the proposed bill.

Dŵr Cymru Welsh Water billpayers who would not find the proposed bills easy to afford were asked what they would do to help pay for the increase in their water bills. Most (58%) would spend less on non-essentials, or on food shopping and essentials (45%).

### Acceptability of investments

76% find the investments acceptable, with the most commonly cited reasons being that the proposals focus on the right services and support for the longer term.

However, when billpayers consider the proposed bill changes, acceptability goes down from 76% to 52%.

The primary purpose of the research was to gauge the opinions of water companies' customers about Ofwat's Draft Determinations, published in July 2024.

### THE RESEARCH AIMS TO DETERMINE:

- Affordability of current household water bills and proposed 2025 – 2030 bills.
- Acceptability of proposed service levels and investments and determine which investment areas are more important to customers.
- Where views in the nations of England and Wales are different to the total combined view across England and Wales.
- Identification of water companies which are outliers from the total combined view across England and Wales.
- Additionally, this research aims to compare these Draft Determination results to the Business Plan research conducted by each water company as set out in the Affordability and Acceptability research guidance.

511 Dŵr Cymru Welsh Water customers were interviewed;

RESEARCH TYPE:	An online quantitative survey with an option to participate through a paper questionnaire.
TARGET:	A <b>representative sample of Dŵr Cymru Welsh Water billpayers</b> (who are at least jointly responsible) <b>aged 18+</b> . Participants must have been customers of Dŵr Cymru Welsh Water and be aware of who their supplier is. Industry exclusion was applied. Data were weighted to reflect the population of the Dŵr Cymru Welsh Water customer base.
SAMPLE SOURCE SPLIT:	The sample was drawn from <b>two</b> sources: <b>online panels</b> managed by Prodege and <b>customer databases</b> from Dŵr Cymru Welsh Water.
SAMPLING METHOD:	Online panel participants were invited via email invite. The customer database was contacted through <b>'push-to-web'</b> approach – either emails or postal letters with a survey <b>'push-to-web'</b> link.
SAMPLE MODE SPLIT:	375 through the online panel, 127 push-to-the web through an email invite, 9 push-to-the web through postal letter invite, 0 postal.
QUESTIONNAIRE:	<b>15 minutes long on average</b> , available in English. The questionnaire was tested before the main launch through cognitive interviews and a pilot survey to ensure clarity, relevance, and effectiveness in capturing accurate responses from participants.
FIELDWORK:	Data was collected from 1 <sup>st</sup> August 2024 to 26 <sup>th</sup> September 2024.

Billpayers were initially asked about their **financial situation** and the **affordability of the current bill**.

Then, they were presented with the **proposed bill**, including water & sewerage charges and inflation and asked about affordability based on these changes.

Billpayers were then informed about Dŵr Cymru Welsh Water's **performance and investment plans** before being asked about the **acceptability of the proposals**.

**Acceptability was then sought again**, with a reminder of the proposed bill changes linked to the investment plans.

A quantitative approach was adopted, the majority of interviews conducted via an online survey.

Online panelists or water company customers were invited to participate through an email invite or letter with a link to the online survey. Customers of water companies were given the option to ask for a paper postal questionnaire to include those digitally disadvantaged. Customers of Hafren Dyfrdwy and Dŵr Cymru Welsh Water could choose to take the survey in English or Welsh\*\*. Data were weighted to match the customer profile of Dŵr Cymru Welsh Water to match the 2021 census profile for gender, age and socio-economic group (SEG).

Additional analysis found that there was a difference in responses from the online panel sample and the push-to-web sample around the affordability of bills, over and above variations in demographics. **The general effect of push-to-web vs. panel was to lower the proportion of customers saying that paying their bill was 'easy'.\* We therefore applied a further level of weighting to adjust the proportion of survey mode (panel vs. push-to-web) within each company, to approximate as closely as possible the mix of these two modes over the whole sample.**

- All reported **base sizes are unweighted**; all % reported are **weighted**.
- **Significance testing** (on a 95% confidence level) has been applied **to compare vs. the total figure for England and Wales (i.e. all water companies) combined**.
- **The margin of error** e.g., 50%: England +/-1.1%, Wales +/- 3.1%, water company +/- 4.4% (assuming base of 500).
- Key **scale questions**, e.g., affordability, have been **netted** for simplicity. E.g., very easy & quite easy have been combined into **NET easy**.
- When referring **'water bills'**, it includes sewerage charges as well.
- When referring to **Total**, this means England and Wales combined.

\* This effect could be due to the mode of contact or the presentation of a personalised bill profile in the push-to-web sample vs an average bill profile in the online panel sample. 2 Dŵr Cymru Welsh Water participants opted to take the survey in the Welsh language.

## SUMMARY OF RESULTS – FINANCIAL SITUATION

Before asking about their current and then proposed bills' affordability, respondents were asked how they felt about their household finances and how well these were going.

20% of Dŵr Cymru Welsh Water billpayers struggled to pay at least one household bill in the past year, either most of the time or all the time.

18% of Dŵr Cymru Welsh Water billpayers currently find it 'quite or very difficult' to manage their finances. Looking to 2030, 40% of billpayers think their household finances will get worse by then and 25% better.

Q2: Overall, how well would you say you are managing financially now? BASE: ALL (511)

Q3: Thinking about your household's financial situation over the next few years up to 2030, do you expect it to get: BASE: ALL (511)

## SUMMARY OF RESULTS - AFFORDABILITY

After the introductory questions, participants were asked how easy or difficult it is to afford their current water bill.

Each billpayer was then presented with a bill profile chart including the current 2024/2025 bill and proposed annual bill changes up to 2029/2030, and the impact of inflation.

Respondents in the 'push to web' sample saw a bill profile based on their current bill; respondents in the online panel sample saw a bill profile based on the current household average bill for Dŵr Cymru Welsh Water customers\*. The bill profiles included forecast inflation.

Nearly half of Dŵr Cymru Welsh Water households find their current water bill easy to afford, while a fifth say it's difficult to afford. **The affordability of the proposed water bill drops to 23% from the current 44% .**

AFFORDABILITY	TOP 2 / BOTTOM 2 NET %	PROPORTION FOR DŴR CYMRU WELSH WATER	RANGE FOR ALL WATER COMPANIES (ENGLAND AND WALES)	AVERAGE PERCENTAGE FOR ALL WATER COMPANIES (TOTAL)	AVERAGE PERCENTAGE FOR ENGLAND

Dŵr Cymru Welsh Water billpayers who would not find the proposed bills easy to afford\* were asked what they would do to help pay for the increase in their water bills. Most would spend less on both non-essentials and food shopping and essentials.

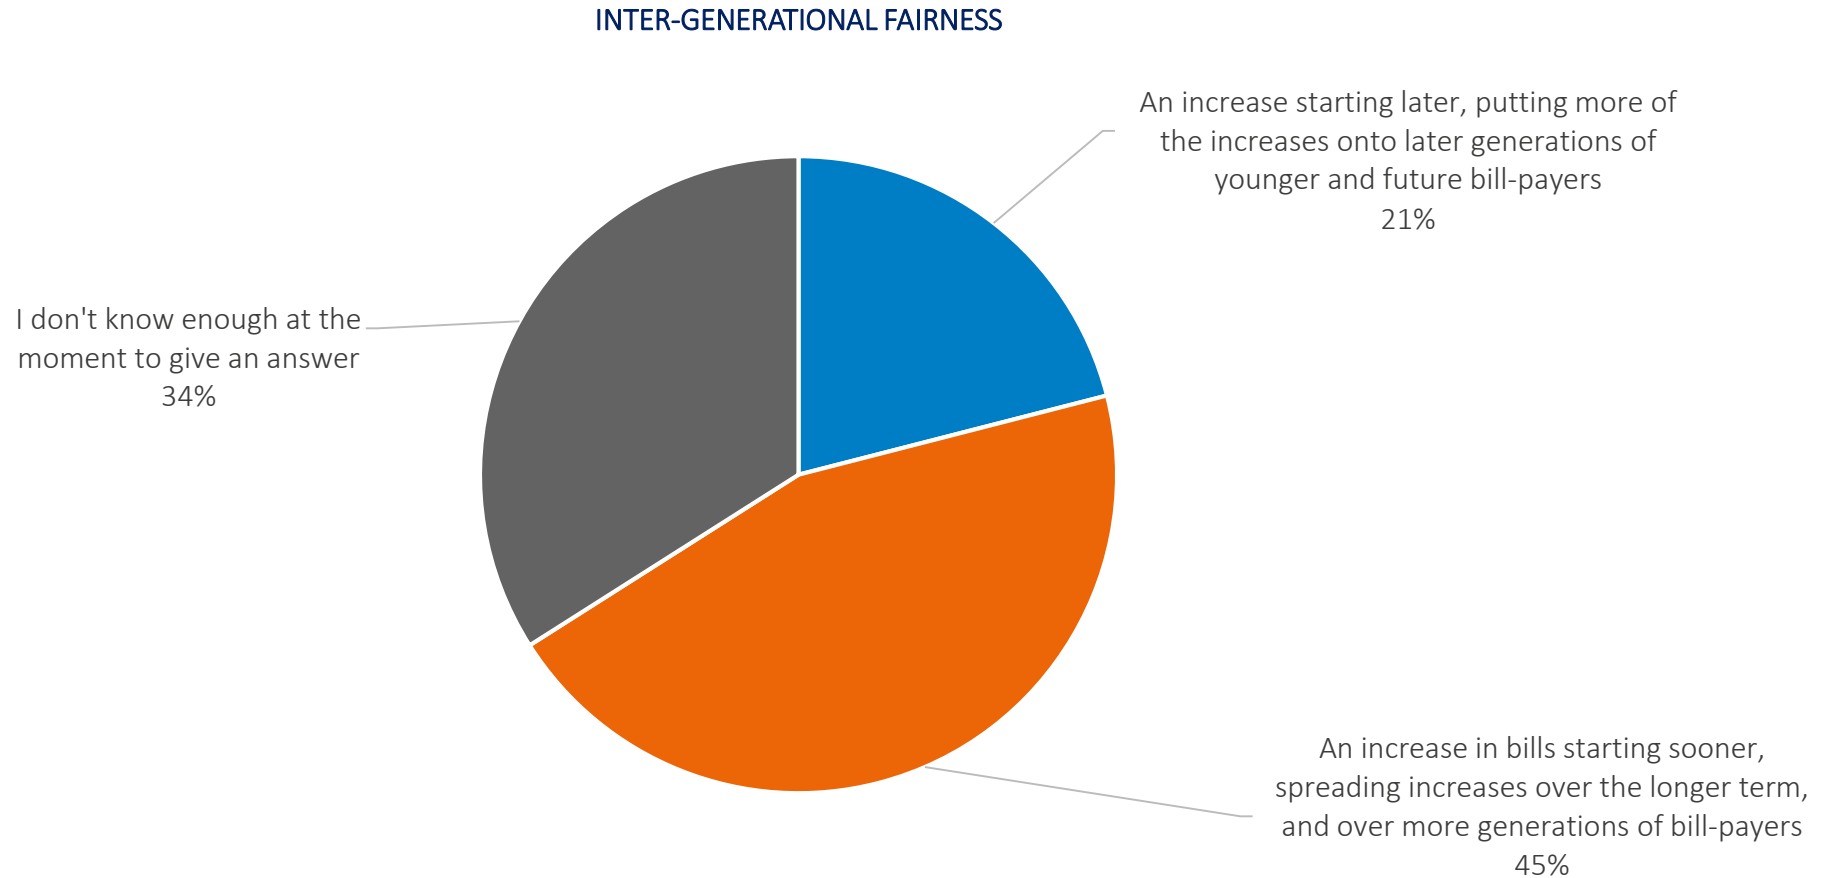

HOW WILL THEY PAY FOR PROPOSED BILL CHANGES

ATTRIBUTES (MULTIPLE RESPONSE)

\* Includes those who found the proposed bills to be neither easy, nor difficult to afford

Dŵr Cymru Welsh Water billpayers were asked an in principle question about how they would prefer bill increases for long-term investments to be phased. 45% would prefer the bill increase starting sooner vs. 21% later. Just over a third didn't know enough to give an answer.

## SUMMARY OF RESULTS - ACCEPTABILITY

Participants were informed of their **water supplier's current performance** and **future targets** for water supply interruptions, drinking water quality, and leakage. The **sewerage service provider's performance was also shown** and included the following service measures: sewage flooding inside properties, sewage flooding outside properties and pollution incidents.

Participants were also shown a **proposal for investments in four areas**: Sewerage services & environment, Protecting water supplies, Improving drinking water quality and Resilience of services to disruption from external events. The delivery of each investment area (e.g., what form it came in, such as the number of smart meters to be fitted) and spending within these areas were specific for each water company.

**76% of Dŵr Cymru Welsh Water billpayers find the investment proposal acceptable.** After being asked about investment proposal acceptability again, but this time alongside a reminder of the proposed bills for 2025-30. The level of non-acceptance doubles, **but 52% still find the proposal acceptable.**

ACCEPTABILITY	TOP 2 / BOTTOM 2 NET %	PROPORTION FOR DŴR CYMRU WELSH WATER	RANGE FOR ALL WATER COMPANIES (ENGLAND AND WALES)	AVERAGE PERCENTAGE FOR ALL WATER COMPANIES (TOTAL)	AVERAGE PERCENTAGE FOR WALES
ACCEPTABILITY OF INVESTMENT PROPOSALS	Acceptable	76%	65% - 81%	75%	75%
	Unacceptable	15%	8% - 24%	15%	15%
ACCEPTABILITY OF INVESTMENT PROPOSALS WITH A REMINDER OF THE BILL CHANGE	Acceptable	52%	43% - 67%	58%	52%
	Unacceptable	35%	23% - 47%	33%	35%

Arrows next to the numbers mark significant differences from the Total for England and Wales, ↑ = significantly more ↓ = significantly less on a 95% confidence level.

Q8: Based on everything you have seen and read about this proposal for your water and sewerage services, how acceptable or unacceptable is it to you? BASE: ALL (511)

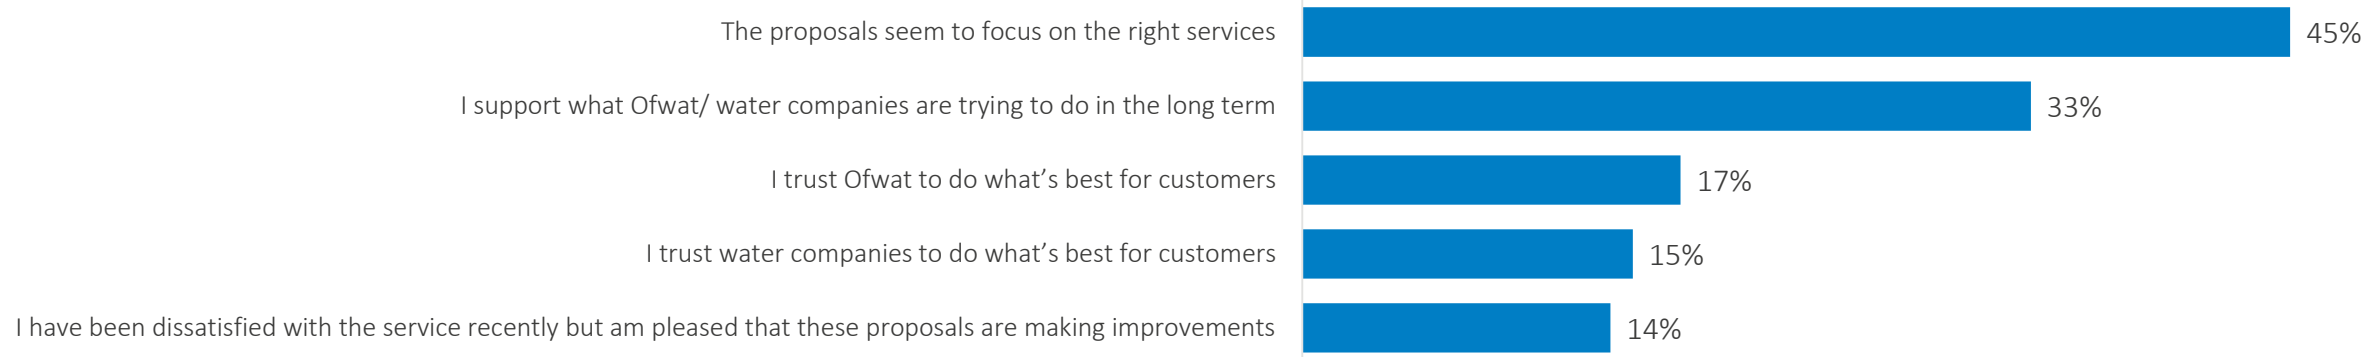

Q10a: Now, thinking about the proposed bill levels for 2025 to 2030, the investment that is planned in services and the proposed service levels, how acceptable or unacceptable are the proposals to you? You can see the reminder of changes to your bill prof BASE: ALL (511)

## SUMMARY OF RESULTS - ACCEPTABILITY

The 76% who find the investment proposals acceptable most often cite that the proposals focus on the right services and support the longer term.

### REASON FOR THE INVESTMENT PROPOSAL BEING ACCEPTABLE/ TOP 5 REASONS

REASONS (SELECT UP TO 2)

On the other hand, the 15% of those who find the investment proposals unacceptable say this is because there is low trust in companies fulfilling the improvements and bill increases are too expensive.

### REASON FOR THE INVESTMENT PROPOSAL BEING UNACCEPTABLE/ TOP 5 REASONS

REASONS (SELECT UP TO 2)

Q8b: What are the two main reasons that you feel the proposals for your water services are acceptable? BASE: ALL THAT FOUND THE INVESTMENT PROPOSALS ACCEPTABLE (390)

Q8a: What are the two main reasons that you feel the proposals for your water services are unacceptable? BASE: ALL THAT FOUND THE INVESTMENT PROPOSALS UNACCEPTABLE (77)

To understand the acceptability of the investment proposals, we presented billpayers with investment areas within the four categories in **red text** below. The investments included relevant numbers and targets from the Draft Determinations. The aim was to determine which investment proposal within each category was most important to billpayers. Some of these investment areas were shown to respondents of all water companies, and some to a subset of water companies.

The top priorities across the categories for Dŵr Cymru Welsh Water billpayers are:

- **Improving sewage treatment processes to help river water quality** in the ‘improving sewerage services and the environment’ area
- **Reducing leakage** in the ‘protecting water supplies’ area
- **Replacement of lead supply pipes** in the ‘improving drinking water quality’ area
- **Improving the resilience of treatment works, pipes and technology** in the ‘improving resilience to reduce the risk of disruption to services’ area:

Improvements for taste, odour and colour of drinking water were included in the investment total, but not shown. It is possible that, had they been included, they would have affected the priority order for services within the drinking water quality area.

<b>IMPROVING SEWERAGE SERVICES AND THE ENVIRONMENT</b>	<b>Column %</b>
Improving sewage treatment processes to help river water quality	46%
Reducing the use of storm overflows which release sewage into rivers	41%
Monitoring river water quality	8%
Don't know/can't say	5%

<b>IMPROVING DRINKING WATER QUALITY</b>	<b>Column %</b>
Replacement of lead supply pipes	55%
Additional water treatment processes	40%
Don't know/can't say	6%

<b>PROTECTING WATER SUPPLIES</b>	<b>Column %</b>
Reducing leakage	56%
Developing new sources of water	26%
Fitting smart water meters	13%
Don't know/can't say	5%

<b>RESILIENCE OF SERVICES TO DISRUPTION FROM EXTERNAL EVENTS</b>	<b>Column %</b>
Improving the resilience of treatment works, pipes and technology	83%
Improving security and resilience to cyber attacks	12%
Don't know/ can't say	5%

## QUOTAS VS. ACHIEVED SAMPLE

# Constructing the research materials

## Proposed bills from 2025-30

- For most companies, this was based on data provided by Ofwat and adjusted to include forecast inflation; push to web respondents saw a personalised bill profile, online panel respondents saw a bill profile based on the average household water charges for Dŵr Cymru Welsh Water
- For Northumbrian Water and Essex and Suffolk Water, South Staffs Water and Cambridge Water, South West Bournemouth and Bristol Water, the respective companies provided the data for CCW/Impact to build specific bill profiles for each area – this meant that respondents saw something more representative of the potential bills changes in their area
- Respondents from water only companies saw a proposed bill which included proposed sewerage service charges – this was made clear in the supporting text

## Water company performance data

- Performance data was based on Ofwat's Water Company Performance report 2022-23, and future performance targets as published in the Draft Determinations

## Investment proposal stimulus

- This was based on Ofwat's Overview document for each water company's Draft Determination
- Where possible the wording for these was generic to support comparisons between companies; context for Wales was included
- Where helpful for respondents, company specific examples were provided under the generic wording, e.g., for large scale water supply developments

## Investment costs

- Respondents saw the proposed investment for each investment area – the total amount over the five years from 2025-30

The questionnaire can be viewed [here](#)

Investment text for Sewerage services and the environment before Q7b

### DŴR CYMRU WELSH WATER

Sewerage services and the environment

**The proposal is for DŴr Cymru Welsh Water to invest £1.3 billion to improve the environment from 2025 to 2030.**

**The biggest areas of investment are:**

**£719 million to reduce the use of storm overflows which release sewage into rivers.** Storm overflows release sewage, often mixed with rainwater, into rivers or seas when sewers are full. This reduces the risk of homes and properties being flooded with sewage. This practice can also harm the environment. By reducing spill numbers, this harm may be less. All storm overflows in Wales now have a monitor fitted to measure how often and how long each is used for.

**The potential performance target is to reduce the use of storm overflows by 36% by 2029-30, down to an average of 28 spills per overflow.** The exact target will be set by Ofwat based on further information from the company. This will take into account Welsh Government's priority to prioritise work on overflows that cause high harm on the environment, rather than number of spills.

The company will develop wetlands and reedbeds to take treated sewage water, to allow natural processes to filter and absorb more the nutrients from the water before it is put back into rivers etc. The company will also develop more storage for rainwater, to reduce the pressure on the sewer network capacity.

**£250 million to improve sewage treatment processes to prevent nutrient pollution in rivers.**

High levels of nutrients such as nitrogen and phosphorous occur in rivers due to things like rainwater run-off from farmland and sewage release into rivers. These nutrients mean that plants grow more quickly, taking oxygen out of the water for fish etc., harming wildlife and habitats. Improving treatment processes at sewage treatment works, will help to reduce the level of things like phosphorus before the treated water is returned to rivers and seas. **DŴr Cymru Welsh Water has a target to reduce the amount of phosphorus entering rivers from water company activities by 17%.** As part of this it is expected to invest in wetlands. Wetlands slow rainwater run-off and let natural processes filter the water before it is returned to rivers.

**£17 million for new targets to monitor river water quality.** Companies must fit 'continuous river water quality monitors' at various points in rivers to get a broader understanding of how their sewage operations affect water quality. **28 river water quality monitors will be fitted on rivers** that are valued for the bio-diversity of the species that live in and around them. The monitors will provide continuous real-time information on the effect of the company's activities on watercourses. **This will help the company identify pollution and water quality issues more quickly.**

Investment text for **Protecting water supplies** before Q7b

## DŴR CYMRU WELSH WATER

### Protecting water supplies

**The proposal is for Dŵr Cymru Welsh Water to invest £341 million over 2025 - 2030 to ensure there is enough water to go around.**

**The biggest areas of investment are:**

**£199 million to develop new sources of water to help protect the region from drought.** This includes:

Plan to build new water treatment works, to replace the existing works at Llwyn-on, Cantref and Pontsticill which are nearing the end of their operational lives.

**The target is to deliver an extra 40 million litres of water a day by 2030.**

**£136 million to fit water meters.**

These water meters can be read without needing to access peoples' homes or land. The reading is transmitted to a device in a meter reading van when it drives past the property. Water meters help water companies to manage leakage as the changes in the readings help to identify leaks. Water meters also help people keep track of the water they are using. **Fit water meters at 805,000 properties from 2025 -2030.** Most of these will replace existing water meters which need to be read manually, some will be new smart meter installations at properties that have not previously had a meter. **The target is to reduce household water use by 15% from 2025 to 2030.**

**£1.5 million to reduce leaks.**

This will involve various approaches, such as reducing water supply pressure where appropriate, to reduce leakage, more sensors to monitor the water supply network to detect leaks, and renewing water mains. **The target is to reduce leakage by 35% from 2025 to 2030.**

Investment text for Improving drinking water quality before Q7b

## DŴR CYMRU WELSH WATER

### Improving drinking water quality

**The proposal is for Dŵr Cymru Welsh Water to invest £112 million for targets from 2025 to 2030 which aim to improve the quality of drinking water.**

**This will include:**

**£54 million for additional water treatment processes.**

Sometimes, the water in the environment (rivers, lakes, reservoirs) which water companies take to treat for drinking water, needs extra levels of treatment to meet drinking water quality requirements. **The proposed investment will help to reduce contacts from consumers about the taste, odour and appearance of tap water.**

**£43 million for the taste, odour and colour of water.**

The company will invest in its network of pipes and/or treatment works to reduce the chance of their condition affecting the taste, odour and colour of drinking water.

**£15 million to replace lead supply pipes which join properties to water mains.**

Some older properties have lead supply pipes. To ensure water is safe to drink, it is treated with a safe chemical which stops the lead leaking out of the pipe and entering the water. However, lead can be a health risk for the very young and old, so water companies are replacing this pipework over time.

**Dŵr Cymru Welsh Water has a target to replace 4,010 lead supply pipes from 2025 to 2030 to improve drinking water quality.**

Investment text for Improving the resilience of services to disruption from external events before Q7b

## DŴR CYMRU WELSH WATER

**Improving the resilience of pipes, sewers and treatment works to reduce the risk of disruption to services**

**£114 million to increase levels of resilience.**

**This will include:**

**£92 million to improve resilience for the company's treatment works and other operational sites.**

The company will build new pipes so that it is easier to move water around within its region. It will also replace old water mains which are in a poor condition to reduce the number of bursts which disrupt water supplies.

**£22 million on other security, including cyber.**

This includes cyber security, in order to meet new statutory requirements and reduce the risk of cyberattacks.

Office: **+44 (0) 1932 226793**  
Impact Research Ltd, 3 The Quintet, Churchfield Road, Walton-on-Thames, KT12 2TZ, United Kingdom

Impact Research, located in Walton-On-Thames, Surrey, was founded in 2010 by Darryl Swift and Dr. David Pearmain, focusing on research in utilities sector from the start. In 2017, we achieved ISO 20252 accreditation, which we've renewed annually since.

Over the years, we've been supporting clients by combining quantitative and qualitative methods to deliver actionable insights. Our dedicated team has built a strong reputation for excellence and innovation.

We've successfully executed projects across various sectors, including FMCG and retail, gas, electricity, water, and local authorities.

In this report, we explored water bill acceptability and affordability for the next 5 years, drawing on our expertise to provide valuable insights and recommendations for CCW and Ofwat.
